(54) Title: SYSTEM OF INFUSION OF PHARMACOLOGICAL SOLUTIONS

(57) Abstract: System for the infusion of pharmacological solutions comprising containing means (3) suitable for containing a pharmacological solution, pumping means (3) for generating a flow of said pharmacological solution from said containing means (3), characterised in that it furthermore comprises adjusting means (13) to vary said flow and command and control means (19) operationally associated with said adjusting means (13). Method for the infusion of a pharmacological solution in a patient, comprising generating a flow of said pharmacological solution from a container containing said pharmacological solution, sending said flow to the catheter means insertable in the body of said patient, adjusting said flow by adjusting means (13) actuated by command and control means (19), the method furthermore comprises programming said flow and infusion times by programming means operationally connected to said command and control means (19).
